SUMMARY

Full-stack software engineer with **startup experience** and internships building production web platforms, APIs, and data-driven features. Built a company website from **0 to 1**, improved backend performance by **35-50%**, and shipped user-facing features using **JavaScript/TypeScript, Python, SQL, PHP, React, Node.js, Django, REST APIs, testing, and distributed systems fundamentals**.

EDUCATION

University of Calgary - Bachelor of Science in Software Engineering

Calgary, AB | 2025

EXPERIENCE

Full-Stack Web Developer - IntelliPK

2025 - Present

- Built and launched **intellipk.com** from **0 to 1** for a Pakistan-based water filtration company, creating its **first public website and professional online presence**.
- Worked **directly with the founder from day 1** to turn business goals into **site architecture, product/service pages, customer messaging, and digital strategy**.
- Owned the full web setup across **responsive design, deployment, domain/hosting, technical SEO, performance, and ongoing updates** to improve credibility, product discovery, and customer trust.

Fullstack Developer Intern - Self Justice

Dec 2024 - May 2025

- Built and maintained **backend features** for a legal information platform used by **1,500+ users**, working in Agile Scrum with JavaScript, REST APIs, and frontend integrations.
- Developed **API endpoints and validation logic** for legal deadline tracking, helping reduce manual tracking work and improve form completion flow.
- Debugged form-submission and data-processing bottlenecks, **reducing processing time by roughly 50%**.

Backend Developer Intern - Inwit

Jun 2024 - Dec 2024

- Developed backend-driven pages and server-side features in **PHP using MVC patterns** for a web platform serving about **5,000 monthly users**.
- Optimized **SQL queries and data access patterns**, reducing page load times by about 35%.
- Automated **recurring server-side tasks** and improved **error handling**, reducing manual intervention for the team.

PROJECTS

MediScanner | React, Node.js, Firebase, PaddleOCR, Capacitor, Axios

Jan 2025 - Apr 2026

- Built a web and mobile app that extracts **Drug Identification Numbers (DINs)** from medication images using OCR preprocessing and regex-based validation.
- Integrated the **Canadian Drug Product Database and Perplexity AI** for real-time medication lookup and reduced manual lookup errors.
- Tested the OCR pipeline across **500+ image cases** and implemented authentication, storage, and deployment using Firebase.

Distributed Agar.io Clone | Phaser, TypeScript, Django, SQL, WebSockets

Mar 2026 - Jun 2026

- Built a **real-time multiplayer browser game** with WebSocket-based state synchronization for player movement and game updates.
- Designed a **layered backend** with a proxy server, Django service, SQL persistence, and replicated data components for **fault-tolerance concepts**.
- Used **Lamport timestamp ordering and replica synchronization** to handle distributed event consistency across backend components.

LEADERSHIP

Vice President of Finance - Code the Change YYC: Managed budgets, reimbursements, and resource planning for student tech nonprofit events with **300+ participants**.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, Java, SQL, PHP, C/C++, HTML/CSS

Frameworks: React, Node.js, Express.js, Django, Flask, FastAPI

Backend & Architecture: REST APIs, WebSockets, MVC, layered architecture, distributed systems, SQL

Tools & Platforms: Git, Docker, Firebase, Google Cloud Platform, VS Code, IntelliJ IDEA, PyCharm

Testing & Libraries: JUnit, PHPUnit, Pandas, NumPy, Matplotlib
